5. Digital Subscriber Line and Consumer Broadband-Only Services

5.1 General Regulations

DSL Services provide transmission services over local exchange service facilities that can be used for simultaneous voice and data communications. Service is provided, where available, between Customer Designated Premises (CDP) and designated Company's central office (CO).

DSL Services use proprietary equipment to provide high-speed digital internet access. The equipment consists of Digital Subscriber Line Access Multiplexer (DSLAM) located in the CO and the corresponding remote "modem" unit located at the Customer premises.

DSL and CBOL over fiber services also use proprietary equipment to provide high-speed broadband services. The equipment consists of an Optical Line Terminal (OLT) located in the CO and the corresponding Optical Network Terminal (ONT) located at the Customer premises.

5.2 Installation

Installation of DSL and CBOL Services will be from the CO to the surge protector located within the Network Interface Device (NID). If the Customer requires an adapter that includes a router, hub, firewall, other devices, or software they may purchase it from any third party or from the Company.

Monthly charges for DSL and CBOL Services are for the circuit and CO termination. Network Interface Card (NIC) for the associated hardware or software is not included in the monthly charge.

If the Customer requires any special inside wiring, they may contract with the Company or any third party provider for that special wiring. Non-recurring charges include the service order and Customer premises visit. They do not include any Customer premises wiring charges beyond the Protector.

During Company promotions or at the Company's discretion, the installation fee may be waived. Installation (non-recurring) charges are set forth in Sections 6.2H, 6.2H.1, 6.2M, 6.2N, 6.2R and 6.2W, following.
